Dear colleagues, dear friends,

on behalf of the organizers of this year's **Fourth Serbian Congress of Infectious Diseases**, I want to welcome you to one of the most beautiful mountains in Serbia, Kopaonik.

I believe that we will be able to achieve the main objective of this meeting, to look into the eyes of modern infectology, and problems and challenges it carries. Although many experts think that infectious diseases belong to the history, today we discover new infectious diseases (eg, Zika virus infection), we know that some old diseases re-emerge (measles, polio), and some are expanding into areas where they did not previously exist (West Nile encephalitis, malaria). There are also problems related to the increasing number of geriatric patients with infectious diseases, nosocomial infections and antimicrobial resistance.

This Congress is planned in the form of plenary lectures, expert sessions, satellite symposia and poster presentations during which you will be able to exchange your experiences with other colleagues and gain new knowledge that you will be able to apply in clinical practice.

Our Congress is named "Congress with international participation" since the lectures will held our dear guests from Slovenia, Croatia, Great Britain, Romania, France and Italy, to whom we owe gratitude for accepting to participate in the work of this meeting. In addition, I hope that you will have the opportunity to enjoy the beauty of this wonderful mountain, where everyone can find their peace and prosperity.

I wish you a successful meeting and a pleasant stay in Kopaonik.
